JOHN W. HAYES
SUPERVISORY PATENT EXAMINER

The Examiner acknowledges amended claim 12 and withdraws the previous claim objection.

Applicant argues that Raju does not disclose performing any type of searching of any information including one or more rate tables for one or more classes of service having a postage rate that matches the postage amount. The Examiner respectfully disagrees. Raju discloses receiving a postage amount entered by a user (Raju: paragraphs 0080; 0083) and a user selecting the corresponding postage rate from a drop down menu box (Raju: paragraph 0083; Figure 13, "1123-11"). The Examiner notes, in selecting a corresponding postage rate class to the postage amount entered, the user is searching one or more rate tables in the drop down menu. The Examiner further notes, it is implied that the information of the one or more rate tables displayed in the drop down menu has to be stored somewhere in the system memory.

Applicant argues that Chernin does not teach or suggest "searching stored information including one or more rate tables for one or more classes of service having a postage rate that matches said postage amount; if not class of service having a postage rate that matches said postage amount is found, displaying an error message; if one ore more classes of service having a postage rate that matches said postage amount is found, displaying said found one or more classes of service to said user". The Examiner notes, Chernin is relied upon only for disclosing the concept of displaying an error message if no matches have been found. It is important to note that it is the combination of Barns-Slavin in view of Raju and further in view of Chernin that discloses all of the limitations of claims 1 and 8.
